(54) MATRIX ARRAY BOARD

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a matrix array board which is used for a flat-panel display device or the like, is provide with a tandem repair circuit 6 between an extension part 51-1 of a pixel electrode 5-1 for forming auxiliary capacitance and its adjacent (prestage) pixel electrode 5-2, lessens reduction in a pixel aperture rate due to the installation of the circuit 6 and prevents the generation of a short circuit between both pixel electrodes 5-1 and 5-2 due to an etching residue.

SOLUTION: A contact hole 45 for connecting the pixel electrode extension part 51-1 to one connection electrode 35 of the tandem repair circuit 6 is formed in an area on the scanning line 11.
